

How Builders Can Close the Loop on Jobsite Hazards — Without the Overhead

If hazard follow-up lives in texts, photos, emails, and verbal “fix-it-now” requests, this session is for you.

Many builders are accountable for safety closeout documentation without a dedicated safety manager or an enterprise suite. This session shows how teams can capture hazards in under a minute, standardize the write-up with AI, assign corrective actions via SMS, and collect proof-of-fix — so you’re inspection-ready without slowing the field.

The safety gap: hazards get noticed — then disappear

Proof-of-fix is scattered or missing

Capture hazards in <60 seconds

Photo or “no photo”

Standardize + assign corrective action

AI write-up + SMS to owner

Proof-of-fix + repeat-hazard trends

Closeout record + dashboard

Presenter

Thomas Campbell — Founder of Safely Track

Works with builders and field teams to close the loop on jobsite hazards — fast capture, clear ownership, and proof-of-fix across active jobsites.
